In my site I have user login and registration page. On login page after successful login I am doing redirect to a page which will show user the corresponding user id. So this part works fine. But when user tries to login for the second time, he will be prompted to login again and again. I tried to get the cookie value and send it to ajax which will do the logic. But when I am returning the response from ajax, it is not refreshing the page. I think this is because of using setcookie() which is used to set the cookie after we are done with the page. So I changed the logic and now I am using if(userLogin){ setcookie("USER_LOGIN", "1"); $.ajax({ url:"includes/register-process.php", type:"POST", data:"", success: function(response){ $("#register-prompt").hide(); } }); } I am passing this variable to register-process.php through ajax include("includes/connection.php"); $user = $_POST['user']; $password = $_POST['password' a1d647c40b

Nederland I have to say that I believe this never happened to me personally... but I have worked with teams who have encountered these issues and there has been instances of a female coworker getting harassed by an "older" male coworker. I'm not saying that this actually happened to the OP but I have seen it several times and witnessed it. Nederland wrote: This is exactly what I am seeing... a very young female (just turned 25) and a much older man. I have always seen them like this before, but I never witnessed the bullying on a scale like this before... Very odd that you would not even bring this up and say anything about it... but the sad part about this is that they were doing that on a public forum. If this was not intentional then you know how to fix this, if it was then you need to look at your company's HR policies.
