Q: Adding new attribute to child object within an array of objects What i'm trying to do is add a new attribute named'sampled' to a group of data that i'm trying to read from a database. The data that I am pulling in is inside of an array that is inside of an object. Is this something that is possible within react? Data that I am getting from my database: { "data": [{ "sample": "sample1", "intake": "350", "poundage": "300" }, { "sample": "sample2", "intake": "200", "poundage": "300" }, {
